

**Amendments to the Claims:**

This listing of claims will replace all prior versions, and listings, of claims in the application:

**Listing of Claims:**

1. (Currently Amended) A printing fluid dispenser for dispensing printing fluid into an inkjet printer cartridge, the inkjet printer cartridge having a fluid reservoir that will rupture when the fluid pressure within the reservoir meets or exceeds a rupture pressure, the printing fluid dispenser including:  
an ink reservoir having an ink outlet for fluid communication with the fluid reservoir of the inkjet printer cartridge;  
means for applying pressure to said ink reservoir in order to force ink through the outlet and into the fluid reservoir of the inkjet printer cartridge; and  
means for limiting the pressure of said ink forced through the outlet to a predetermined level related to the rupture pressure of the fluid reservoir of the inkjet printer cartridge.
2. (Original) A printing fluid dispenser according to claim 1, wherein the means for limiting pressure comprises a means for limiting applied pressure to said ink reservoir.
3. (Original) A printing fluid dispenser according to claim 2, wherein the ink reservoir comprises a deformable membrane.
4. (Original) A printing fluid dispenser according to claim 2, wherein the means for applying pressure comprises a handle.
5. (Original) A printing fluid dispenser according to claim 2, wherein the means for limiting applied pressure to said ink reservoir includes a resilient member having deformation characteristics selected to limit said pressure to a predetermined level.
6. (Original) A printing fluid dispenser according to claim 4, wherein the resilient member is located between the ink reservoir and the means for applying pressure to the ink reservoir.
7. (Original) A printing fluid dispenser according to claim 5, wherein the resilient member comprises a spring.

8. (Original) A printing fluid dispenser according to claim 6, wherein the reservoir and the spring are located within a portion of the handle.
- 9.-10. (Cancelled)
11. (Currently Amended) A printing fluid dispenser for injecting fluid into a reservoir in an inkjet printer, the printing fluid dispenser including:
  - a deformable container of printing fluid having an outlet for fluid communication with the reservoir;
  - a handle arranged to apply pressure to said container to expel fluid in order to force ink through the outlet and into the reservoir; and
  - a resilient member arranged to limit pressure applied to the deformable container by the handle in order to prevent rupture of ~~an~~ the external reservoir, ~~coupled to said dispenser in use.~~
12. (Currently Amended) A printing fluid dispenser according to claim 8, wherein the deformable container comprises ~~an~~ a membrane.
13. (Original) A printing fluid dispenser according to claim 9, wherein the resilient member comprises a spring.
14. (Original) A printing fluid dispenser according to claim 10, wherein the spring includes a platform arranged to abut the membrane.
